#### General Description

Highly technical work responsible for overall operation of the Sheriff's Office multi-user computer systems, servers, and networks.

#### Typical Duties

***Note: Listed functions, duties, responsibilities and skills is not intended to be all-inclusive and the employer reserves the right to assign additional responsibilities as deemed necessary for the operational efficiency of the Sheriff's Office.***

Plans, designs, and installs multi-user computer systems, servers, networks, and associated hardware/software. Manages key resources to ensure availability of properly functioning services including but not limited to monitoring utilization and tuning the use of networks and network devices and ensures the proper operation of and access to print services, file services, communication services, electronic mail services, cluster servers

and other systems required for efficient operations.

Develops and implements network administration, security and data integrity applications. Establishes and implements backup and emergency recovery procedures as necessary. Performs capacity planning and performance monitoring for distributed computing systems and networks. Ensures proper administration, management, and maintenance of electronic mail services, host and server networking software/hardware, communication servers, and gateway systems and links.

May serve as database administrator. Designs database structures including tables, indexes, views, and stored procedures. Designs and implements tasks necessary to save and recover databases from hardware and software failures, and maintains database integrity and security. Monitors database loads and event logs when needed to ensure efficient operation of databases. Provides technical assistance to programmers regarding database efficiency techniques.

Monitors network functions for potential problems with servers, and other equipment. Analyzes and diagnoses hardware/software problems and provides corrective solutions. Determines future equipment needs as required.

Maintains network documentation, diagrams, and schematics as required to support operations.

Provides technical support to Client Specialists as required including troubleshooting complex problems involving various systems or networks. Develops, implements, and enforces division policies and procedures to insure information integrity. Prepares standard operating procedures for functions within area of specialty.

### **Minimum Qualifications**

- Bachelor's Degree in Computer Science or related field
- Supplemented by four (4) years of progressively responsible work experience in a networking environment
